

Empowering women in mining

TseboKgadi - which means “women with knowledge” in Sotho - was established by top mining consultancy, Ukwazi, to not only serve current industry needs and requirements, but to also drive the representation and advancement of women in the mining sector.

Who is TseboKgadi?

TseboKgadi is a black female-led mining services company, specialising in contract mining related activities, with a strong emphasis on operational excellence, health and safety, sustainability, data-driven approaches and inclusivity.

By partnering with leading advisory group, Ukwazi, TseboKgadi is able to access specialised mining, engineering and environmental skills and capabilities.

Headquartered in Mpumalanga with an office in the Northern Cape, TseboKgadi, executes projects in both these two provinces, utilising industry best practice, cutting-edge technology and world class project management.

TseboKgadi is a BBBEE level 2 company.

Our partnership with Ukwazi

As a wholly-owned subsidiary of Ukwazi, TseboKgadi has the full technical support of Ukwazi behind all initiatives, from concept to execution.

A dedicated team of specialists with in-depth industry knowledge and experience in the areas of mining studies, operations, mine infrastructure engineering, environmental services (ESG), techno-economic assessments, onsite technical services and rehabilitate mining.

What do we offer?

We provide contract mining solutions that are informed by an appropriate life of mine and destination schedule, waste dump design and budgeting process. Our core focus?

Operations excellence that is cost-effective and based on appropriate equipment selection; customised for specific projects or operations.

Our portfolio includes:

Rehabilitation projects

Let us help you navigate complex environmental legislation and frameworks through:

- Mine residue dump mining
- Closure planning
- Waste, liability and mine water management

Small-to-medium scale surface mining projects

These projects are ideally up to 300 000 BCMs per month and include:

- Top soil removal
- Drill & blast
- Load & haul operations

Haul roads maintenance

Make sure that the haul roads on your mining operation tick all the boxes and more.

We provide:

- Optimised design and grade selection, using 3D modelling
- Road maintenance
- Operator education

Stockpiles maintenance

With our comprehensive understanding of short-term mine planning, let us worry about accurate level measurement and compliant stockpile management. We capitalise on:

- Automated tracking and monitoring of yellow equipment
- Thorough understanding of short-term mine planning
- Efficient and effective operations for superior contract management results

Screening and crushing projects

We provide the latest in screening and crushing technology, boosting efficiency and profitability. TseboKgadi utilises:

- In and out of pit crushing solutions, including mobile crushers
- Grade control methodologies to inform crushing and screening
- Processes that aid extraction, reduce downtime and optimise energy

In-pit dewatering

Is groundwater compromising the efficiency and safety of your mining project?

Let us assist with:

- Robust and flexible dewatering strategies
- Hydrogeological assessments and pumping tests
- Goldsim modelling of tables and ground

Our services are:

Cost effective

Based on appropriate equipment selection

Customised for specific projects or operations

What makes us different?

The TseboKgadi's team consists of highly-skilled mining professionals, who are able to leverage their extensive sector knowledge and experience to deliver quality technical advice, hands-on expertise and strategic project solutions. At our core, we embody:

Technical Excellence

Quality is underpinned by expert mine planning and scheduling

Innovation

Use of new, cutting-edge rehab mining techniques and equipment

Ambition

Drive to deliver quality results, on time and within budget

Shared Value

Supporting and contributing to local communities and employment

Need a solution underpinned
by accurate scheduling, industry
leading design and feasible
budgeting processes?
